NOWPAP Marine Environmental Watch has been operated by the Ministry of Environment of Japan and Northwest Pacific Region Environmental Cooperation Center since 2001 to support implementation of Northwest Pacific Action Plan, a part of Regional Seas Programme of the United Nations Environment Program. This website provides remotely sensed information of marine environment observed by satellite sensors in the Northwest Pacific region.

Beginner's Guide

For the use of marine environment

Data Search

Data Search

You can search download satellite data on this page.

Data Evaluation

A tool for comparing and verifying the concentration of satellite chlorophyll a developed by CEARAC.

Data Analysis

How to download and analyze provided data is available. Introduction to case studies, research projects and user interviews are also available.
